IN THE CLAIMS

Please amend the claims as follows:

Claim 1 (previously presented): An outer tube, which is made of silicon carbide, and which has an upper portion closed and a lower portion opened, has the lower portion formed with a tapered portion so as to expand a diameter thereof toward a lower end thereof, and has a flange formed on an outer peripheral side of the lower portion; the following conditions being met:

- 1) a ratio of t_a/D_1 is from 0.0067 to 0.025,
- 2) a product of $t_a \times D_1$ is from 600 to 4,000 (mm²),
- 3) $(D_{F2}-D_{F1})\times t_c/(D_1\times t_a)$ is from 0.1 to 0.7, and
- 4) L_1/L_2 is from 1 to 10;

where the outer tube has a thickness of t_a (mm) and an inner diameter of D_1 (mm), the flange has a thickness of t_c (mm), an inner diameter of D_{F1} (mm) and an outer diameter of D_{F2} (mm), and the tapered portion has a height L_1 (mm) and an expanse of L_2 (mm), and where the outer tube is configured to be used in a thermal treatment system.

Claim 2 (original): The outer tube according to Claim 1, wherein the tapered portion has upper and lower edges of an inner peripheral side rounded with a radius of 2 mm (R2) or above.

Claim 3 (original): The outer tube according to Claim 1, wherein the tapered portion has an inner surface having a surface roughness Ra of not greater than 7 μ m.

Claim 4 (original): A thermal treatment system using an outer tube, which is made of silicon carbide, and which has an upper portion closed and a lower portion opened, has the lower portion formed with a tapered portion so as to expand a diameter thereof toward a

lower end thereof, and has a flange formed on an outer peripheral side of the lower portion; the following conditions being met:

- 1) a ratio of t_a/D_1 is from 0.0067 to 0.025,
- 2) a product of $t_a \times D_1$ is from 600 to 4,000 (mm²),
- 3) $(D_{F2} D_{F1}) \times t_c / (D_1 \times t_a)$ is from 0.1 to 0.7, and
- 4) L_1/L_2 is from 1 to 10;

where the outer tube has a thickness of t_a (mm) and an inner diameter of D_1 (mm), the flange has a thickness of t_c (mm), an inner diameter of D_{F1} (mm) and an outer diameter of D_{F2} (mm), and the tapered portion has a height L_1 (mm) and an expanse of L_2 (mm).

Claim 5 (original): The thermal treatment system according to Claim 4, wherein the tapered portion has upper and lower edges of an inner peripheral side rounded with a radius of 2 mm (R2) or above.

Claim 6 (original): The thermal treatment system according to Claim 4, wherein the tapered portion has an inner peripheral side having a surface roughness Ra of not greater than 7 µm.

Claim 7 (original): The thermal treatment system according to Claim 4, wherein the height L_1 of the tapered portion satisfies the relationship of H/4<L₁<3 \cdot H/4, where a distance between a lowest end of a heater and a bottom surface of the outer tube is H (mm).

Claim 8 (new): An outer tube for a thermal treatment system, comprising silicon carbide, wherein the outer tube is configured to surround an inner tube of a thermal treatment system and has an upper portion closed and a lower portion opened, the lower portion is formed with a tapered portion expanding a diameter of the outer tube toward a lower end thereof and has a flange formed on an outer peripheral side of the lower portion, a ratio of t_a/D_1 is from 0.0067 to 0.025, a product of $t_a\times D_1$ is from 600 to 4,000 (mm²), (D_{F2} -

Application No. 10/786,555 Reply to Office Action of April 5, 2006

 D_{F1})×t_c/(D_1 ×t_a) is from 0.1 to 0.7, and L_1 /L₂ is from 1 to 10, where the outer tube has a thickness of t_a (mm) and an inner diameter of D_1 (mm), the flange has a thickness of t_c (mm), an inner diameter of D_{F1} (mm) and an outer diameter of D_{F2} (mm), and the tapered portion has a height L_1 (mm) and an expanse of L_2 (mm).
